Problem #1: Even, Odd

```
test_lab4('even(x)');
test_lab4('odd(x)');
test_lab4('trim(plus(even(x), odd(x)))');
```

```
_____________
even(x): sequence O.K.
Your answer:
z=
    data: [0.5         2.5           2           2           2

Problem #5 Plotting

```
w = linspace(-pi, pi, 1001);
plot_magph(x, w);

% This is a purely real and even function.
% What can you say about the phase?
% Specifically why is it either 0 or pi?
x = sequence([1 1 1], -1);
set(figure, 'Color', 'w');
plot_magph(x, w);

% This is a purely real and odd function.
% What can you say about the phase?
% Specifically why is it either +pi/2 or -pi/2?
x = sequence([-1 0 1], -1);
set(figure, 'Color', 'w');
plot_magph(x, w);

% Here are a series of pulse functions.
% What happens to the magnitude of the transform as the pulse gets
 broader?
% You may note that the phase 'chatters' between +pi and -pi at some
 values of w.
% This doesn't look nice and it's confusing. How could you fix this in
 your plot_magph
% program so that the phase doesn't chatter? No biggie if you can't.
% (Hint: it has something to do with a very small imaginary part...).

x = sequence(ones(1, 5), -2);
set(figure, 'Color', 'w');
plot_magph(x, w)

x = sequence(ones(1, 21), -10);
set(figure, 'Color', 'w');
plot_magph(x, w)

x = sequence(ones(1, 101), -50);
set(figure, 'Color', 'w');
plot_magph(x, w)
